

Environmental Policy

Siam Global House Public Co., Ltd and its subsidiaries (“The Company”) has intention to operate business sustainable along with environmental responsibility by realizing and giving the importance to the reduction of the environmental impact caused by the Company’s operations. There is the environmental management, the efficient use of resources, and appreciation in value, as well as implementation of the 3 R principle (Reduce, Reuse, Recycle) as a practical basis to make the most of the Company’s resources, thereby establishing environmental practice as follows;

1. Compliance with the Laws and regulations

The company will strictly comply with the laws, regulations and environmental requirements related to the Company's operations.

2. Environmental Management

The Company will conduct business with environmental and social responsibility by improving or developing operational processes and business activities in accordance with environmental conservation, reducing energy consumption, reducing resource consumption, reducing greenhouse gases, and reducing wastes to prevent, control and minimize the impact on the environment and surrounding communities.

3. Efficiency of natural resources utilization in operations

The Company sets natural resource management goals and plans in short-term and long-term for sustainable development, covering the following key issues:

3.1 Energy Efficiency Management

- Use a valuable resource, increasing the proportion of renewable energy consumption to be 65% of total energy consumption by 2027, and the development of new technologies will reduce energy consumption and greenhouse gas emissions.

3.2 Water Efficiency Management

- Use a valuable resource, reducing water consumption per store, and increasing water recovery compared to base year 2019.
- The supervision and control of a wastewater treatment of stores to be in accordance the effluent standards required by laws before discharge to the outside. As well as to consider reducing wastewater discharge by using the treated wastewater to water the plants in stores in order to increase the efficiency of water consumption and to reduce drainage into public water systems

3.3 Efficient waste and waste management

- Proper waste segregation and applying the circular economy principles and 3 Rs principles (Reduce, Reuse, Recycle) for cost-effective use of resources, including reducing the quantity of waste taken to landfill.

4. Supporting responsible consumption for customers

The Company conducts the recruitment and supports the sale of eco-friendly products, including energy-saving products, renewable energy promotion groups, global warming reduction groups, and natural resource saving groups.

5. Raising awareness for stakeholders

The Company will strengthen environmental knowledge and awareness and personal responsibility for all levels of employees, customers, partners and related stakeholders. By aiming to reduce the environmental impact along with supporting the cost-effective and optimal use of resources.

6. Public Disclosure

The company will disclose environmental operating information, discussion of stakeholders in regard to performance and environmental issues pursuant to stakeholder expectations through annual reports or sustainability reports.

The Company's Management Team will continue to push and encourage the Company to implement such policies in order to achieve the set resolutions.

Please be informed accordingly and adhere to practice all together.

Announced on May 17th, 2022
